THE LOGIC OF THE IMAGE

Emanuele coccia
Ehess - Paris
Mirror and Medium
The mirror as the paradigm in order to think the ontological status of images:

i.e. Something which exists in a different place from subjects and objects, and which has an intermediate nature.
"I am a Thomist for whom the sensory order resonates with the divine Logos

A thomist theory of communication »

My theory is only acceptable to thomists for whom consciousness as analogical proportion among the senses from moment to moment, is quite easy to grasp.
1. The concept of *Medium* comes from Aristotle‘s *De anima*

1a The word *medium* is the translation for the greek word μεταξύ

1b It is in the work of Averroes (Ibn Rushd) that the concept of *medium* becomes the systematic condition of possibility of the existence of every form of images

*(Commentarrium Magnum in Aristoteles De anima – übers. von Michael Scotus vor 1225)*
1a The word *medium* is the translation for the Greek word μεταξύ (cf. *De anima*, 419a 20)
A plain proof whereof is that if one places on the sight itself a coloured object, it is not seen. [...] Democritus put forward the erroneous opinion that if the medium were a vacuum, perception would be everywhere exact, even of an ant in the sky. This is, however, impossible; for only when the sensitive faculty is affected does vision occur. This cannot, however, be effected by the colour seen, in itself. Therefore the medium is necessary.
Any extension, whether of skin, hand, or foot, affects the whole psychic and social complex. (p. 3-4)

Any invention or technology is an extension or self-amputation of our physical bodies, and such extension also demands new ratios or new equilibriums among the other organs and extensions of the body  [...] p. 45
Since all media are fragments of ourselves extended into the public domain, the action upon us of any one medium tends to bring the other senses into play in a new relation. As we read, we provide a sound track for the printed word; as we listen to the radio, we provide a visual accompaniment. Why can we not visualize while telephoning? At once the reader will protest, "But I do visualize on the telephone!"

When he has a chance to try the experiment deliberately, he will find that he simply can't visualize while phoning, though all literate people try to do so and, therefore, believe they are succeeding. But that is not what most irritates the literate and visualizing Westerner about the telephone. Some people can scarcely talk to their best friends on the phone without becoming angry. The telephone demands complete participation, unlike the written and printed page. Any literate man resents such a heavy demand for his total attention, because he has long been accustomed to fragmentary attention. Similarly, literate man can learn to speak other languages only with great difficulty, for learning a language calls for participation of all the senses at once, p. 266-7
Contra Kapp

The basis of the technical nature of man is not the man but the eye.
Every new technology is an evolutionary extension of our own bodies. The evolutionary process has shifted from biology to technology in an eminent degree since electricity. Each extension of ourselves creates a new human environment and an entirely new set of interpersonal relationships. The service or disservice environments (they are complementary) created by these extensions of our bodies saturate our sensoria and are thus invisible. Every new technology thus alters the human sensory bias creating new areas of perception and new areas of blindness. This is as true of clothing as of the alphabet, or the radio.

Ibid.
To Walter Ong  
Nov. 18 1961

The media as extension of the sense organs alter sensibility and mental process at one. All the other senses are altered in themselves and in their ratios among themselves, by any technology that extends or externalizes any one of them. The history of art provides a massive check on this. Marx's idea of change was based on the idea of industrial production and consumption as extensions of our organic life. He got no further than that. But he could say that we are different when our organic life is extended beyond our sensory envelope. Probably if he had had a more adequate theory he would never have got acceptance. [...] I am naturally eager to attract many people to such study as this and see in it the hope of some rational consensus for our externalized senses. A sensus communis for external senses is what I'm trying to build. Does that make sense to you Walter?
Letter to Jacqueline Tyrwhitt, Dec 23 1960

Now that by electricity we have externalized all of our senses, we are in the desperate position of not having any sensus communes. Prior to electricity the city was the sensus communis for such specialized and externalized senses as technology had developed. From Aristotle onward, the traditional function of the sensus communes is to translate each sense into the other senses, so that a unified, integral image is offered at all times to the mind. The city performs that function for the scattered and distracted senses, and spaces and times, of agrarian cultures. Today with electronics we have discovered that we live in a global village, and the job is to create a global city, as center for the village margins. [...] The problem of urban planning today in the field of nuclei that is the global village is assuming more and more the character of language itself, in which all words at all times comprise all the senses, but in ever shifting ratios which permit ever new light to come through them.
Letter to Claude Bissel
4 janvier 1961

We have driven our senses out of ourselves, by externalizing all them by technology, creating a new global envelope of sense which demands perpetual nutrition or titillation; but we have no con-sensus. In our individual organisms, there are poets which translate each sense into each other sense, as long the impressions occur. It is now mandatory that we achieve similar consensus for our collectively externalized senses hence the frantic calls to order, in our time. So long as the externalizations of sense were rudimentary in the form of writing and architecture, the pressures for consensus could be met by urban order. The traditional role of city is that of center or consensus for rustic margin. Now that our technologies are no longer positional but interplanetary, an urban consensus will not serve.
The TV image is not the first to have reshaped the outlook, the preferences, and the desires of a society. There have been earlier outering of the human senses in technological form. Externalizations of our senses, such as the wheel, and the phonetics alphabet, of radio and photography, also constituted closed systems which invaded the open system of our senses with tremendous transforming power. But the TV image is the first technology by which man has outered his haptic or tactile powers. Its effects, therefore, on the balance or ratio among our senses. Since at all times consciousness involves a ratio among the senses, any alteration of intensity of our senses causes an immediate closure or completion of pattern. Such new closure or completion is, in fact, a new posture of mind charged with new preferences and desires, as well as with new patterns of perception.
II 
Fashion and Advertising
Iconic Normativity

In modern globalized societies it is images, more than words, that are responsible of the shaping of social customs and practices.
Ancient Iconic Normativity

Emblems and Imprese are the archeology of Advertising
Sachplakat

unlike traditional design approaches that encouraged viewers to linger over an advertisement, the Sachplakat is constructed to enable instant comprehension: it unites words and pictures in a single forceful image that communicates its sales message immediately. The object poster function like a hieroglyph, a word-picture that can be apprehended instantly a type of image that requires no lengthy exposition and no process of reading or decoding of discrete sign in a particular sequence in order for its meaning to become clear.
MANOLI
Sachplakat

Ernst Growald

“Good posters should not be read – they should be seen”

“don’t write any novel on the poster no one wants to get cold feet while standing on the street”

instantaneous act of seeing rather than the more complex and extended process of reading
the usual early twentieth century German poster was an amalgamation of formal often florid text and a fairly conventional rendered image
I. Why Advertising

Advertising was the most important and most powerful open-air laboratory for the production of socially relevant images and therefore of iconic normativity in modern societies.
I. Advertising or Morality

advertising images cannot be recognized and separated from other types of images or iconic structures on the base of their content (an exclusive object), nor because of their having some unique form (a specialized language) or a peculiar message (concrete suggestions for selling things or for shopping).
I. Advertising as the most radical form of iconic realism

Everything has to appear
II. Advertising or What Morality is about

Advertising is the contemporary form assumed by a discourse, which has never been absent from social life.
II. Advertising or
What Morality is about

Advertising is the Iconographic
Identity between the Good and the Goods

Advertising displays the Good as existing in things, in all things we can use, produce, imagine, buy, consume. Conversely, advertising images reflect and represent human happiness and human perfection always as something embodied in a commodity or as something that individual can embody through a special object.
II. Advertising and Morality

-Man is depicted as a Moral Cyborg (it needs artificial things in order to be happy and ‘moral’)

-Commodities are defined not through the opposition between use and Exchange values. They are defined – morally- as what gives us moral perfection and happiness

-The operator of this identification is choice and taste

TOSCANI FOR BENETTON

1983-2000
Collaboration with
Oliviero Toscani
Tutti i colori del mondo.

Atmosfera nordica per jacquards norvegesi. Maglioni frangivento, parafrredda e anti-nebbia. Le previsioni parlano chiaro: temperatura sotto zero, morale bello stabile. Sciarpe e guanti per tutti, calda dappertutto.
Warhol:
- The face is freed from history, decontextualized from time and space
- Individuality is accentuated. It becomes stereotypic
- The acid colors (out of phase with the profile) give to the face a sort of pale and ephemeral eternity: glamour
Toscani

Equivalence between political difference and esthetical difference (cloth-difference)

Allegorization: not persons but national flags, globes, religious symbols or mythological figures

The mythological identity become a cloth and vice-versa, the cloth has a kind of mythological consistence

Fashion become the space of construction of myths: fashion constructs history, time and the sense of everything (and vice-versa everything’s identity is just a matter of fashion)
NEW MARKETING

ARNOLD MITCHELL, Nine American Lifestyles. Who we are and where we are going, Warner Book 1983
III. What is a Norm?

-A norm is a mainly *Iconic* Item

-An Iconic norm works as a metasimbolic statement

-Social Symbolism is constantly questioned
Metasymbolic change
Malboro sex Change

Marlboro cigarettes were marketed as feminine cigarettes. The slogan selected was purely for women: “Mild as May”. A Hollywood star was invited to become the face of the brand May West
OK-Miss America!
We thank you for your patronage

“It’s toasted”
Your Protection—against irritation—against cough

TUNE IN ON LUCKY STRIKE—its modern minutes with the world’s finest dance orchestras and famous Lucky Strike features, every Tuesday, Thursday and Saturday evening over N. B. C. networks.
Metasymbolic change

In 1953 medical scientists made an official statement, where they claimed that cigarette smoking provokes lung cancer. For the first time in the history of the USA the tobacco consumption decreased. Cigarettes with filter, among which were Marlboro, were perceived by the customers as cigarettes for women only. After the terrifying medical discovery, however, this type of cigarettes looked safer for the customers.
Metasymbolic change

In order to change the perception of cigarettes with filter as the product “for girls,” some brilliant marketing solution was required, and Morris decided to invite one of the best American advertisement specialists Leo Burnett. The future legend of the advertisement decided to kill everything that was feminine in the brand by means of manhood personified. A number of made-up characters, invented by Burnett, such as “case-hardened sailor,” “skyscraper construction workers,” “war correspondents,” were supposed to add some healthy dose of testosterone in to the Marlboro mix. The first and main character was certainly “cowboy the prairie tamer.” He was the character, around whom Leo Burnett built the future advertising campaign.
Marlboro

You get a lot to like
- filter
- flavor
- flip-top box

Here's old-fashioned flavor in the new way to smoke. Marvelous taste of honest tobacco comes full through. Smooth-drawing filter keeps right in your mouth. Works fine but doesn't get in the way. Modern Flip-Top Box keeps every cigarette firm and fresh until you smoke it.

(Made in Richmond, Virginia, from a New Philip Morris Recipe)

The filter doesn't get between you and the flavor!

Yes, this easy drawing but hard-working filter sure delivers the goods on flavor. Popular filter price. This new Marlboro makes it easy to change to a filter. This one you'll like.

(Made in Richmond, Virginia, from a New Philip Morris Recipe)
Come to where the flavor is.
Come to Marlboro Country.
Metasymbolic change

Besides the new Marlboro pack became an even greater packaging sensation – it was this very brand that from then on was released in the flip-top packaging, which as a result became a standard to adhere to. “Flip-top” is a hard cardboard case with a top that flips open. Such pack was extremely practical (cigarettes were not easily crumpled now), as well as it was enormously significant for the market – now the smoker had to display the pack to those, who were around him, every time when he wanted to smoke, for it was uncomfortable to open flip-top in his pocket.
Other Cases of Sex Change = Vespa
SUBCULTURE

- Chosen and not inherited identity (able to change)
- Ephemeral and not essential identity
- Local identity (individual or common but in a limited form) not universal
- Objective identity, which exists much more in and through things (cloths, objects) than in consciousness
SUBCULTURE
the meaning of style
